Romac's DJ400 and DJ405 dismantling joints are telescoping flanged fittings which can be lengthened and shortened, allowing access to valves, pumps and other fittings.

Following installation of a Romac dismantling joint, our customer enjoys a fully restrained connection allowing a desirable assembly and disassembly tolerance within the system.

The Romac DJ400 combines a flanged spool piece with restraint tie-rods in one easy-to-use assembly.

The DJ405's design eliminates restraint tie-rods with Romac's UL rated, FM approved RomaGrip™ to lock the spool piece into the desired position.
